SUMMARY

Recent Computer Science graduate from the University of San Francisco with a concentration in Artificial Intelligence and hands-on experience as a Software Engineer through internships in San Francisco and Gdańsk. I have built production full-stack applications and AI systems, including a TypeScript/Node.js MCP server for LLM tool integration, and deployed web software now running across 2000+ devices.

EXPERIENCE

Consilient Labs | Software Engineer Intern

San Francisco, CA | Jan. 2026 – May 2026

- Led the development of a multi-tool Model Context Protocol (MCP) server in TypeScript/Node.js enabling tool integration for LLM agents.
- Architected a modular tool registry allowing new tools to be added with zero changes to the server core.
- Implemented async job queuing using BullMQ/Redis to handle long-running tool calls without blocking agent responses.

IDO Electronics | Software Engineer Intern

Gdańsk, Poland | May 2025 – Aug. 2025

- Developed and deployed a production-ready web application for managing Modbus-to-M-Bus conversion devices, deployed across 2000+ devices.

Computer Science Tutoring | Private Tutor

Remote | Dec. 2023 – Jun. 2024

- Tutored students in Java and Python, covering basic programming and algorithmic problem-solving.

EDUCATION & CERTIFICATIONS

University of San Francisco

San Francisco, CA | Aug. 2022 – May 2026

Bachelor of Science in Computer Science

Concentration in Artificial Intelligence

- Member of: Compsigh (Computer Science club), Entrepreneurship Club

MIT xPRO

Remote | Mar. 2023 – Sept. 2023

Professional Certificate in Coding: Full Stack Development with MERN

Gdańsk Autonomous High School

Gdańsk, Poland | Sep. 2019 – Jun. 2022

- Vice-president of the School's Math Team
- 2nd place in Regional Mathematics Team Competition

PROJECTS

AI Gerrymandering Analysis

- Built an AI-driven redistricting analysis system that generated 40,000+ alternative Massachusetts congressional maps and compared them to the enacted plan.
- Applied machine learning and graph-based analysis in Python to evaluate map fairness using efficiency gap and compactness metrics.

Travel Tracker

- Built a full-stack React/Node.js/MongoDB app for tracking visited countries on an interactive world map with live stats.
- Implemented JWT authentication and a REST API with Express and Mongoose for user accounts and saved travel data.

Climate Migration Forecasting using Machine Learning

- Built an ML pipeline to predict climate-related displacement using refugee, disaster, and climate datasets.
- Trained and evaluated Decision Tree, Random Forest, and XGBoost models, achieving R^2 of 0.61 with a time-based split.

SKILLS

Languages: TypeScript, JavaScript, Python, Java, C++, HTML, CSS

Frameworks: React.js, Node.js, Express.js, Vue.js

Databases: MongoDB, SQL

Tools: Docker, Git, Claude Code, Cursor, Notion, Figma
